

REFILLABLE BULK SOAP THREATENS THE HEALTH OF WASHROOM USERS.

AND YOUR GOOD RELATIONSHIPS WITH CUSTOMERS.

Refillable bulk soap is the kind typically poured from a gallon jug of soap into a dispenser reservoir. One out of four refillable bulk soap dispensers are contaminated with illness-causing bacteria.¹

The really bad news is, once dispensers become contaminated, they can't be cleaned, even with bleach. The bacteria re-grows. Contaminated dispensers need to be replaced in order to protect human health.²

25x

Washroom users can have **25 TIMES** more germs on their hands **AFTER** washing with contaminated soap.³

BEFORE

AFTER

Actual petri dish photos

Messy, labour-intensive and contamination-prone. Refillable bulk soap dispensers work against your efforts to create a clean, healthy and productive building environment. Fortunately, there's a better way.

GOJO® SANITARY SEALED™ soap systems are the safe, smart, sustainable alternative.

SAFE – Factory-sealed refills reduce the threat of germs. Every new refill comes with a fresh nozzle, so there's no long-term exposure to the germs in the washroom environment.

SMART – The snap-in soap refill supports the image of washroom cleanliness, reduces maintenance time and eliminates the hassle of refilling dispensers from bulk fill bottles.

SUSTAINABLE – The SANITARY SEALED Soap System is better for people *and* the planet. The recyclable refills use 30% less material than traditional HDPE bottles.

Make the switch to safe, smart and sustainable
GOJO SANITARY SEALED Soap Systems.

REFILLABLE BULK SOAP IS A PROVEN RISK

Organisations including the World Health Organization (WHO) have all recognised the bacterial contamination risk of “topping off” refillable bulk soap dispensers, and have issued guidelines against the practice.^{4,5,6}

Sealed soap dispensing systems are being installed in more public washrooms today because of their many advantages over refillable bulk soap, starting with the health and well-being of washroom users.
